

Once again, the neurological form, Equine Herpes Myeloencephalopathy (EHM), of EHV-1 has been confirmed in Iowa. It is important to remember to obtain information about EHV-1 or any other disease from reliable sources. Posts on social media are not reliable sources to keep informed. Since I have had a lot of questions over the last month about EHV-1, I wanted to share some reliable websites on EHV-1 and the current status of the disease. Consulting with your equine veterinarian is also a great option as he or she can give educated and accurate advice for your unique situation pertaining to your horses or stable.
